

INSTALLATION INSTRUCTIONS

SHOWER | VALENCIA ELITE Round Pivot
900 x 900
1000 x 1000

Note: Tapware and accessories not included.

BEFORE YOU BEGIN:

Before installing the shower please read these instructions carefully to familiarise yourself with the required tools, materials and installation sequences. Please leave these instructions for the consumer after installation. Refer to the separate care and maintenance guide for important care and cleaning information.

Ensure that the shower tray and wall, if applicable, are completely finished prior to installing your shower door and return. Follow all warnings, cautions and instructions contained in this guide.

SAFETY

1. ENGLEFIELD strongly recommends that a minimum of TWO persons install this enclosure due to the weight of the door panels.
2. Toughened safety glass cannot be cut. Risk of injury or product damage.
3. Wear protective footwear when lifting panels.
4. Wear safety glasses when drilling.

ATTENTION

1. The wall retainers must be installed onto a waterproof, vertical and flat wall surface. Failure to do so will result in an unsatisfactory seal, which may cause property damage. The wall inclination (out of squareness) is recommended to be out by no more than **+/- 4mm/m**.
2. Please install this door onto an ENGLEFIELD Quick - Fit® shower tray only, unless installing directly onto tiled walls and floor.
3. Care must be taken when drilling into walls and floors to avoid any hidden pipes or wires.
4. It is the responsibility of the INSTALLER to ensure that the installation complies with council and or local authority bylaws.

Instructions, drawings, and diagrams contained in this manual present information available at the time of printing. Although every attempt has been made to keep them up-to-date, Englefield reserves the right to implement product changes without further notice.

TOOLS AND MATERIALS REQUIRED:

PARTS IDENTIFICATION:

CONSTRUCTION REQUIREMENTS:

ATTENTION

Due to the weight of the glass panels Englefield strongly recommends constructing double studs (as below) to fix the wall retainers to.

Size	Dim 'A'	Dim 'B'
900 x 900	900	900
1000 x 1000	1000	1000
1000 x 900 L/H	1200	900
1000 x 900 R/H	900	1200

INSTALLATION - OPTIONS:

OPTION 1 - Acrylic Wall & Tray

Tray: For tray installation refer to the instructions supplied with the tray.

Wall: For wall installation refer to the instructions supplied with the wall.

- Proceed to Door and Return Installation.

OPTION 2 - Tiled Wall & Acrylic Tray

Tray: For tray installation please refer to the instructions supplied with the tray.

Wall:

- The vertical wall retainers **MUST** be installed onto the waterproof membrane **PRIOR TO WALL TILING**. If possible the complete door system should be installed onto the waterproof membrane prior to wall tiling.

CAUTION: Failure to install the wall retainers first may mean the door system may not fit on the shower tray due to the tile thickness.

- If not installing the complete door system prior to tiling, install the wall retainers and tiles. The retainer cover extrusion can be inserted after tiling - there is no need to leave a tiling gap. Refer to image.

- Proceed to Door and return installation.

OPTION 3 - Tiled Wall & Floor

- The door and return can be installed directly onto the wall and floor tiles.

- Proceed to Door and Return Installation.

INSTALLATION:

1

Caution: Ensure tray or tiled floor is level & walls are vertical & square.

Tip: Cover the waste to prevent the loss of small parts. If installing onto a tray protect the tray surface during installation.

(a) Mark the locations of the wall retainers.

For tray base option:

- Mark 10mm in from top edge of tray.

For tiled base option:

- Mark from finished wall to outer edge of retainer.

Size	A	B
900 x 900	875	875
1000 x 1000	975	975

2

- (a) Position the wall channels on the wall. The flange with pre-drilled holes should face inside the shower enclosure. Using a level, make sure that the channel is upright.
- (b) Mark the position of the fixing holes down the centre of the channel, then remove the channel.
- (c) Drill with a 3mm bit. For other types of wall structure, alternative fixings may be required (not supplied).
- (d) Apply silicone sealant along the length of the wall and at the bottom where the wall channel will be placed, including the top of the tray.
- (e) Position the wall channels on the wall and install the fixing screws.
- (f) Fully tighten the fixing screws, making sure that the wall channels are upright.
- (g) Repeat the process for the other wall channel.

3

Note! The enclosure is reversible to allow for left or right hand door opening. The handle will be on the opposite side to the pivot point. The notched glass and rail pivot blocks determine the door handing. Ensure the return panels and rails are correctly oriented to match.

- (a) Place one of the curved rails onto the floor and insert the notched glass panel, making sure the glass locates correctly into the seal.
- (b) Install the fixing screws to secure the glass panel frame to the bottom rail.

4

- (a) Insert the second glass panel into the lower rail, making sure the glass locates correctly into the seal.
- (b) Install the fixing screws to secure the glass panel frame to the bottom rail.
- (c) Place the top curved rail in position, making sure that it locates correctly over the glass panels
- (d) Install the fixing screws to secure the glass panel frames to the top rail.
- (e) Retighten all the screws, making sure that the whole assembly is secure and square.

Note! Do not fix the ST4*8 screw into the top rail at this stage.

5

Note! This process requires two persons.

Make sure the enclosure is kept parallel when lifting into place.

- (a) Lift the shower assembly into position and fit the upright frame posts into the fixed wall channels on both sides of the enclosure.
- (b) Centralise the enclosure within the wall channels and make sure everything is level.

6

- (a) From the inside of the shower enclosure, drill four 3mm holes in the door frame. The hole locations are centre marked on the inside of the wall channel.

Caution! Take care not to drill all the way through or damage the shower.

- (b) Insert the retainer screws into one wall channel and tighten.
(c) Repeat the process for the other wall channel.

7

- (a) Insert pivot sleeve into the pivot block on rail, carefully lift the door panel, locate the bottom pivot pin into the pivot sleeve.
- (b) Install pivot sleeve onto top pivot pin, lift the top rail up until the door hinge pivot pin can be fitted into top rail pivot block.
- (c) Fix the ST4*8 screw into the return panel tightening bracket from the top side of rail.

9

- (a) Install the door handle, ensuring that the grub screws are on the underside.
- (b) Fit the caps to the top of the extrusions. Add silicone or modify caps to fit if required.
- (c) Apply sealant along the outside surfaces of the enclosure. Do not seal from inside.
- (d) Install the wall finishing strips, if desired.
- (e) Allow the silicone sealant to cure for 24 hours before use.

Installation complete.

CLEANING AND MAINTENANCE INSTRUCTIONS
